‹› **Documentation**

Overview

Package quotedprintable implements quoted-printable encoding as specified by RFC 2045.

Index

type Reader
    func NewReader(r io.Reader) *Reader
    func (r *Reader) Read(p []byte) (n int, err error)
type Writer
    func NewWriter(w io.Writer) *Writer
    func (w *Writer) Close() error
    func (w *Writer) Write(p []byte) (n int, err error)

Examples

NewReader
NewWriter

Constants

This section is empty.

Variables

This section is empty.

Functions

This section is empty.

Types

type Reader

```
type Reader struct {
    // contains filtered or unexported fields
}
```

Reader is a quoted-printable decoder.

func NewReader

```
func NewReader(r io.Reader) *Reader
```

NewReader returns a quoted-printable reader, decoding from r.

▶ Example

func (*Reader) Read

```
func (r *Reader) Read(p []byte) (n int, err error)
```

Read reads and decodes quoted-printable data from the underlying reader.

type Writer

```
type Writer struct {
    // Binary mode treats the writer's input as pure binary and processes end of
    // line bytes as binary data.
    Binary bool
    // contains filtered or unexported fields
}
```

A Writer is a quoted-printable writer that implements io.WriteCloser.

func NewWriter

```
func NewWriter(w io.Writer) *Writer
```

NewWriter returns a new Writer that writes to w.

▶ Example

func (*Writer) Close

```
func (w *Writer) Close() error
```

Close closes the Writer, flushing any unwritten data to the underlying io.Writer, but does not close the underlying io.Writer.

func (*Writer) Write

```
func (w *Writer) Write(p []byte) (n int, err error)
```

Write encodes p using quoted-printable encoding and writes it to the underlying io.Writer. It limits line length to 76 characters. The encoded bytes are not necessarily flushed until the Writer is closed.
