Overview

Package html provides functions for escaping and unescaping HTML text.

Index

func EscapeString(s string) string
func UnescapeString(s string) string

Examples

EscapeString
UnescapeString

Constants

This section is empty.

Variables

This section is empty.

Functions

func EscapeString

```
func EscapeString(s string) string
```

EscapeString escapes special characters like "<" to become "<". It escapes only five such characters: <, >, &, ' and ". UnescapeString(EscapeString(s)) == s always holds, but the converse isn't always true.

▶ Example

func UnescapeString

```
func UnescapeString(s string) string
```

UnescapeString unescapes entities like "<" to become "<". It unescapes a larger range of entities than EscapeString escapes. For example, "á" unescapes to "á", as does "á" and "á". UnescapeString(EscapeString(s)) == s always holds, but the converse isn't always true.

▶ Example

Types

This section is empty.
